

**Driver LC 25W 350-600mA flexC SC ADV**

advanced series

With strain-relief (see accessory)

**Product description**

- \_ Can be either used built-in or independent with clip-on strain-relief (see accessory)
- \_ Small design (97 x 43 x 30 mm)
- \_ Constant current LED driver
- \_ For luminaires of protection class I and protection class II
- \_ Temperature protection as per EN 61347-2-13 C5e
- \_ Adjustable output current between 350 and 600 mA, in 5 steps with ADV plug technology (pre-selected current 350 mA)
- \_ Max. output power 26.4 W
- \_ Nominal lifetime up to 100,000 h
- \_ 5 years guarantee (conditions at <https://www.tridonic.com/manufacturer-guarantee-conditions>)

**Housing properties**

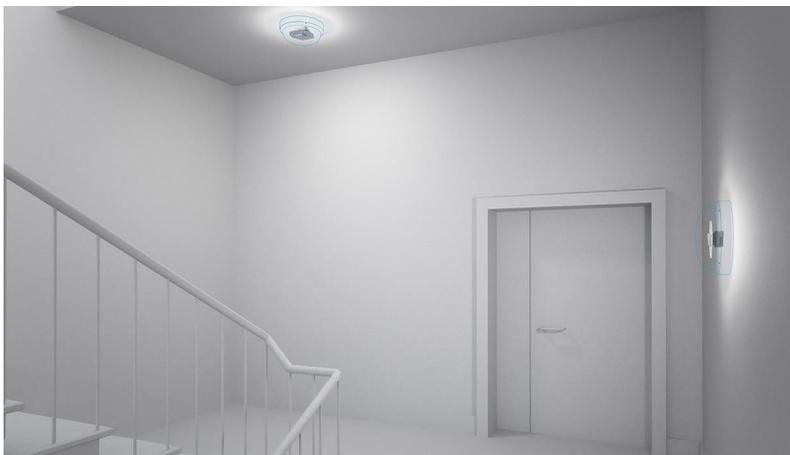

- \_ Casing: polycarbonate, white
- \_ Type of protection IP20

**Functions**

- \_ Overtemperature protection
- \_ Overload protection
- \_ Short-circuit protection
- \_ No-load protection
- \_ Burst protection voltage 1 kV
- \_ Surge protection voltage 1 kV (L to N)
- \_ Surge protection voltage 2 kV (L/N to earth)

**Typical applications**

- \_ For spot light and downlight in retail and hospitality applications
- \_ For panel light and area light in office and education application

① Test result at 600 mA.

② Output current is mean value.

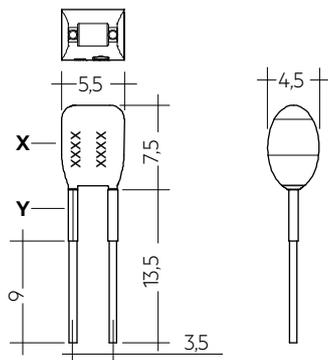

③ Test result at 25 °C.

④ Type A is a short circuit plug (0 Ω).

## ADV Plug for output current select

Accessory

## Product description

- \_ Ready-for-use resistor to set output current value
- \_ Compatible with LED driver serie LC flexC ADV; not compatible with I-SELECT (generation 1) and I-SELECT 2 (generation 2)
- \_ Resistor is base insulated
- \_ When using your own resistors, make sure the resistor must be isolated
- \_ Resistor power 0.25 W
- \_ Current tolerance  $\pm 2\%$  additional to output current tolerance
- \_ Hot plug of the resistor is not permitted
- \_ For detailed current setting see table "Specific technical data" of the respective LED driver and chapter 3.7 or 3.8 Current setting in data sheet

### 1.1 Glow-wire test

according to EN 61347-1 with increased temperature of 850 °C passed.

## 2. Thermal details and lifetime

### 2.1 Expected lifetime

#### Expected lifetime

Type	ta	40 °C	50 °C
LC 25W 350-600mA flexC SC ADV	tc	65 °C <sup>Ⓢ</sup>	75 °C <sup>Ⓢ</sup>
	Lifetime	100,000 h	50,000 h

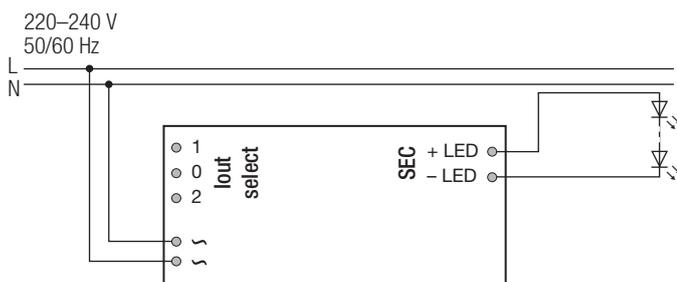

<sup>Ⓢ</sup> Test result at max. output voltage.

The LED drivers are designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

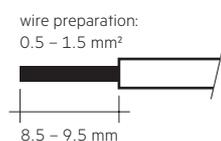

## 3. Installation / wiring

### 3.1 Circuit diagram

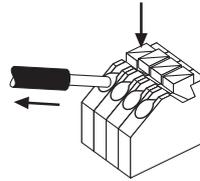

### 3.2 Wiring type and cross section

For wiring use stranded wire with ferrules or solid wire from 0.5–1.5 mm<sup>2</sup>. Strip 8.5–9.5 mm of insulation from the cables to ensure perfect operation of the push-wire terminals. Use one wire for each terminal connector only.

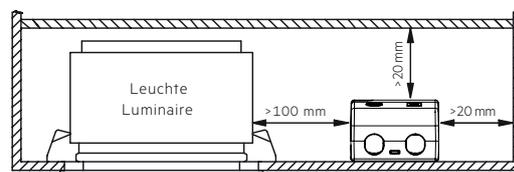

### 3.3 Release of the wiring

Press down the “push button” and remove the cable from front.

### 3.4 Fixing conditions when using as independent Driver with Clip-On

Dry, acidfree, oilfree, fatfree. It is not allowed to exceed the maximum ambient temperature (ta) stated on the device. Minimum distances stated below are recommendations and depend on the actual luminaire. Is not suitable for fixing in corner.

### 3.5 Wiring guidelines

- All connections must be kept as short as possible to ensure good EMI behaviour.
- Mains leads should be kept apart from LED driver and other leads (ideally 5 – 10 cm distance)
- Max. length of output wires is 2 m.
- To comply with the EMC regulations run the secondary wires (LED module) in parallel.
- Secondary switching is not permitted.
- Incorrect wiring can damage LED modules.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

### 3.6 Replace LED module

1. Mains off
2. Remove LED module
3. Wait for 20 seconds
4. Connect LED module again

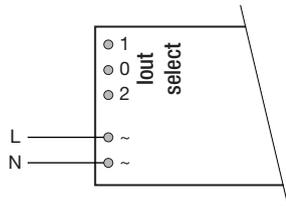

Hot plug-in or secondary switching of LEDs is not permitted and may cause a very high current to the LEDs.

### 3.7 Installation instructions

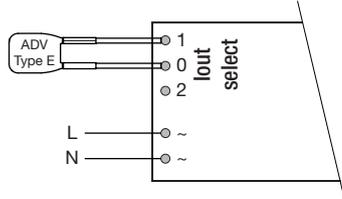

The LED module and all contact points within the wiring must be sufficiently insulated against 3 kV surge voltage. Air and creepage distance must be maintained.

3.8 Current setting

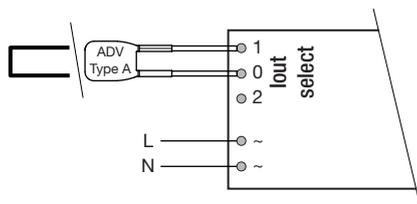

350 mA: All terminals open

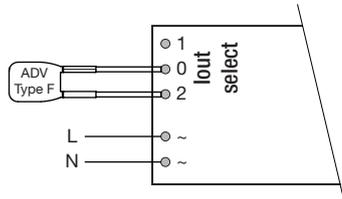

400 mA: Terminal 0 and 1 connected with resistor ADV Plug Type E BR (article number: 28002096)

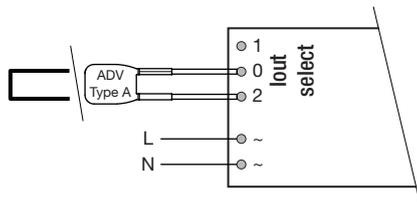

450 mA: Terminal 0 and 1 connected with 0 Ω wire (max. 6 cm length) or resistor ADV Plug Type A BR (article number: 28001771)

500 mA: Terminal 0 and 2 connected with resistor ADV Plug Type F BR (article number: 28002097)

600 mA: Terminal 0 and 2 connected with 0 Ω wire (max. 6 cm length) or resistor ADV Plug Type A BR (article number: 28001771)

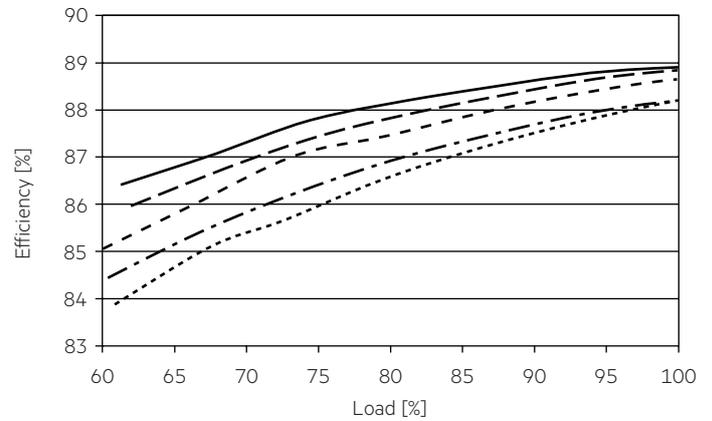

3.9 Mounting of device

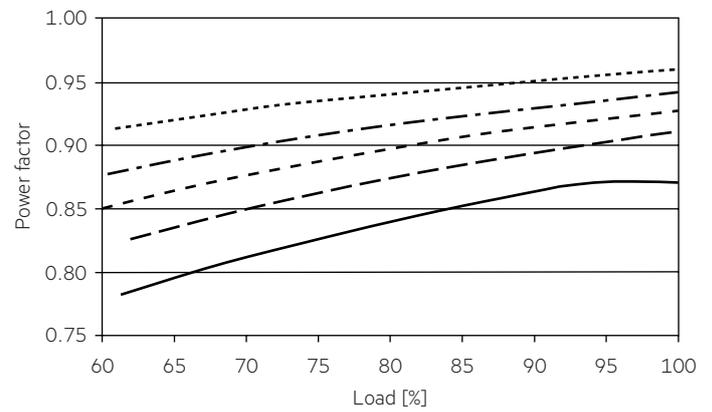

Max. torque for fixing: 0.5 Nm/M4

4. Electrical values

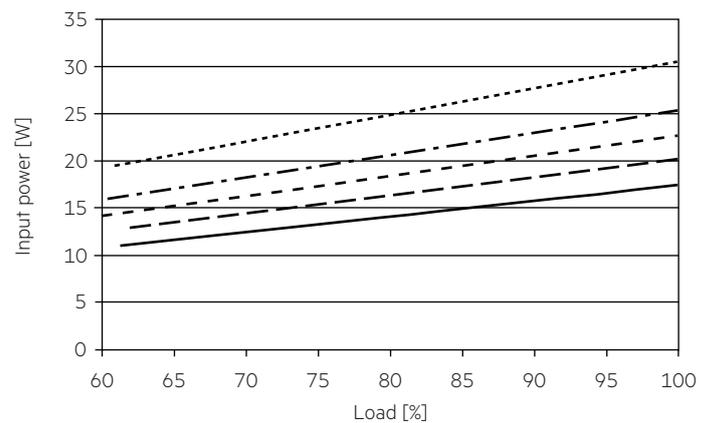

4.1 Efficiency vs load

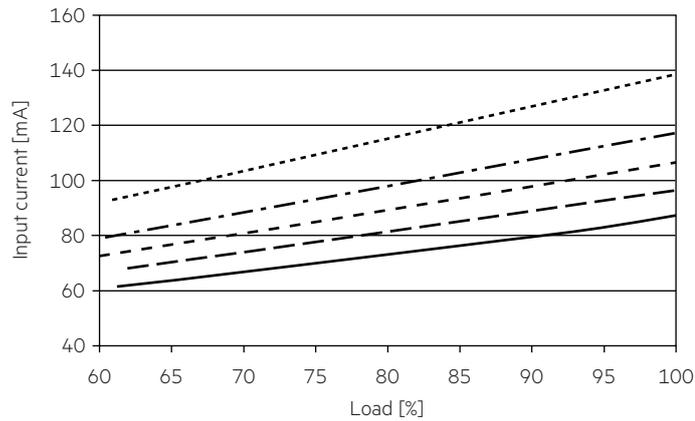

4.2 Power factor vs load

4.3 Input power vs load

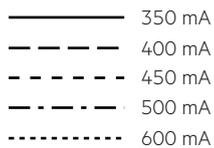

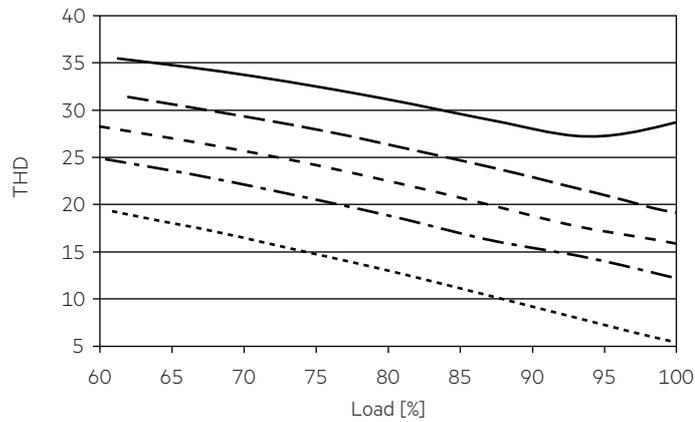

#### 4.4 Input current vs load

#### 4.5 THD vs load

THD without harmonic < 5 mA (0.6 %) of the input current:

#### 4.6 Maximum loading of automatic circuit breakers in relation to inrush current

<b>LC 25W 350-600mA flexC SC ADV</b>	24	32	40	51	14	19	24	30	25 A 150 µs

These are max. values calculated out of inrush current! Please consider not to exceed the maximum rated continuous current of the circuit breaker. Calculation uses typical values from ABB series S200 as a reference. Actual values may differ due to used circuit breaker types and installation environment.

#### 4.7 Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load) in %

<b>LC 25W 350-600mA flexC SC ADV</b>	< 10	< 7	< 5	< 3	< 3	< 3

Acc. to 61000-3-2. Harmonics < 5 mA or < 0.6 % (whatever is greater) of the input current are not considered for calculation of THD.

## 5. Functions

### 5.1 Short-circuit behaviour

In case of a short circuit on the secondary side (LED) the LED driver switches off. After elimination of the short-circuit fault the LED driver will recover automatically.

### 5.2 No-load operation

The LED driver works in burst working mode to provide a constant output voltage regulation which allows the application to be able to work safely when LED string opens due to a failure.

### 5.3 Overload protection

If the maximum load is exceeded by a defined internal limit, the LED driver will protect itself and LED may flicker. After elimination of the overload the nominal operation will recover automatically.

### 5.4 Overtemperature protection

The LED driver is protected against temporary thermal overheating. If the temperature limit is exceeded the LED driver will switch off. It restarts automatically.

## 6. Miscellaneous

### 6.1 Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V<sub>DC</sub> for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V<sub>AC</sub> (or 1.414 x 1500 V<sub>DC</sub>). To avoid damage to the electronic devices this test must not be conducted.

### 6.2 Conditions of use and storage

Humidity: 5% up to max. 85%,  
not condensed  
(max. 56 days/year at 85%)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be within the specified temperature range (ta) before they can be operated.

### 6.3 Maximum number of switching cycles

All LED driver are tested with 50,000 switching cycles.
